Metal Bowls, Mirrors & Magnifiers:

Metal bowls, mirrors and magnifiers are a welcome addition to any outdoor space. They encourage children to explore and investigate a range of materials and develop science observation skills.

However, these products need extra supervision which needs to be considered in any risk benefit assessment:

1. Metal is a heat conductor. It can get hot to touch when placed in direct sunlight.
2. Mirrors, magnifiers and metal all reflect the heat's rays. This may create a fire risk depending upon how the rays are reflected and the surface they target.
3. Birds can get confused by mirrors and fly into them. Please check this out when attaching mirrors to walls and fences to look after our feathered friends.

Please enjoy your new resources and get in touch if you have any queries.

We are always interested in new ideas for different products. Email ideas@cosydirect.com
If your idea makes the catalogue we make it up and send it to you for free 😊.

Yours,

The Cosy Crew.
